No one knows exactly what’s next in EMC and Wireless testing. But two things are certain:

1. The demand for more power and higher frequencies will continue.
2. AR will always be several steps ahead, with the amplifiers and accessories that meet all your testing needs, even as those needs keep changing.

Our “S” Series Amps Are Already Ready.

AR “S” Series amplifiers are designed and built for the future. With the options you want and the power & frequency you'll need. Models 5S8G20A and 20S8G20A deliver 5 and 20 watts respectively across the 8-20 GHz range. And, with our subampability feature, the 5 watt easily expands to 20 watts.

And all “S” Series amps generate 100% of rated power and make it available to the load – even when mismatch is severe. They reproduce signals with exceptional linearity. Spurious signals, noise figures and distortion are extremely low.

AR’s expansive in-house capabilities – which include a state-of-the-art Microelectronics lab – make it possible to offer these new solid-state amplifiers along with a level of performance and dependability that is unmatched in the industry. No one beats AR's quality. Period.

And of course all AR products are backed by the strongest, most comprehensive warranty in the industry, and a global support network that’s second to none.
