

Model BP00100
Current Monitoring Probe
100Hz–100MHz

The Model BP00100 is a clamp-on current-monitoring probe. The probe is used to measure RF currents flowing through the conductor onto which the probe is placed. Voltages are actually measured and then converted to a current using the calibrated transfer impedance.

SPECIFICATIONS

Electrical:

- Frequency Range100Hz–100MHz
- Maximum Current (Primary)100 amps pulse; 3 amps CW
- Transfer Impedance(See graph)

Mechanical:

- Internal Diameter32 mm
- External Diameter98 mm
- Input Connector.....Type N
